100 μm

Kuva 14. Bidjovagge, Norja; rikaste +74 μm 2-4.10.86 (P13523). Pyriittiä (SK) ja sinkkivälkettä (ZNS) rikasteessa. Suurennus 175x.

50 μm

Kuva 15. Bidjovagge, Norja; rikaste +74 μm 2-4.10.86 (P13523). Meloniittia (MLN) kuparikiisussa (CUK) ja lyijyhondetta (PBH) ja markasiittia (MK) sinkkivälkkeessä (ZNS). Suurennus 350x.

A large, dark, layered rock specimen is the central focus of the image. It has a rough, weathered appearance with visible horizontal bedding or layering. The rock is situated on a beach composed of numerous dark, angular rocks and pebbles. In the background, the ocean waves are breaking onto the shore, creating white foam. A white rectangular label is placed on the ground in front of the rock, with the word "SJAKT" written on it in black, uppercase letters. The overall scene is outdoors, likely at a geological field site.

SJAKT
